Test Execution Plan

1. Introduction

This document outlines the plan for executing the test cases for the banking application. The goal is to ensure that all major features of the application are working as expected, with a focus on the login, transaction, and reporting functionalities.

2. Scope

The execution plan covers the following areas:

- User login

- Account transactions

- Transaction history reporting

Tests will focus on both positive and negative scenarios.

3. Test Environment

The tests will be executed in the following environment:

- OS: Windows 10, macOS

- Browser: Chrome, Firefox

- Database: MySQL

- Tools: Selenium, Postman

4. Test Execution Process

1. Prepare the test environment and ensure all prerequisites are met.

2. Execute the test cases as outlined in the test plan.

3. Log the actual results and mark test cases as pass or fail.

4. Report any defects or issues found during execution.

5. Retest after defects are fixed.

5. Schedule

The testing is planned to start on October 1st and last for 2 weeks. Each major feature will have dedicated testing days, with bug fixing and retesting in the final week.
